🛡 Military Service: Completed 📅 17/07/1999

Objective

A dedicated Frontend Developer with extensive experience in frontend technologies and a solid background in backend technologies, seeking a dynamic role to contribute my expertise for mutual growth.

Education

- **Bachelor's in Computer Science**   10/2017 – 07/2021
  Faculty of Science, Alexandria University   Alexandria, Egypt
  - CGPA: 3.1 / 4
  - Solidified technical foundation and critical problem-solving skills.

Work Experience

Frontend Engineer | Techhive, *Techhive* ⎘   11/2023 – present
                                                                                         Alexandria, Egypt

- Managed full application lifecycle, overseeing design to support phases.
- Developed clean, functional code while optimizing performance and enhancing user interfaces.
- Stayed updated on tech trends, ensuring improvement in development approaches.

Fullstack using .NET internship | 3 months program, *ITI* ⎘   07/2023 – 11/2023
                                                                                         Alexandria, Egypt
- Proficiently used AngularJS for frontend development and enhanced user experiences.
- Gained solid understanding of networking and .NET framework for backend functionality.
- Led end-to-end web application creation, seamlessly integrating AngularJS and .NET.

Front-end Internship | Summer Internship, *ITI* ⎘   07/2019 – 08/2019
                                                                                         Alexandria, Egypt
- Proficiency in HTML, CSS, JavaScript, jQuery, and React JS for front-end development.
- Crafted a seamless user-friendly Ecommerce app, achieving 100% success in implementing CRUD operations via seamless FakeJson backend integration.

Projects

Ask Wafi
- Developed the frontend for Ask Wafi, an AI assistant guiding project managers through key project stages.
- Built UI for diagnostic diagrams and strategic recommendations based on user input.
- Implemented multi-session support, diagram sharing, and renaming features.
- Created interfaces for account management, including password/email updates and subscription changes.

Evicare | Tech Hive
- Developed user-friendly dashboards with CRUD operations and filtering options for enhanced usability.
- Designed an efficient Redux store to manage the project's overall state, ensuring optimal performance.
- Managed integration with the backend, ensuring seamless interaction and high-performance request handling.

AppAsap | Tech Hive
- Developed a React Flow tab detailing the specifications for each generated app, including project descriptions, features, and step-by-step relations.
- Integrated CRUD operations for steps and features using Redux and React Flow's native functionalities for seamless management.
- Improved the user interface by introducing a landing page that displays all user-generated apps along with their respective data, offering options to create new apps or access existing ones with ease.
- Led end-to-end implementation of responsive design, optimizing the user interface for mobile devices and enhancing accessibility for mobile users.
- Integrated a real-time chatbot to apply changes across generated applications, implemented version control to track and restore previous states, and ensured each update was reflected as a new version accessible through the chatbot interface.

Auction System | Github
- User Authentication: Implemented a secure sign-up and sign-in system for user access
- Product Management:Enabled users to add products and bid on existing listings.
- Personal Dashboard:Created an intuitive dashboard for users to monitor listings and bidding status.
- Bidding System:Developed a transparent bidding mechanism, with a history feature for user reference.

Roadn | GItHub
- Developed a mobile app for seamless customer transport across Egyptian cities and governates.
- Utilized Flutter for the frontend, while employing Node.js, Express.js, and MongoDB for the backend.
